

FOR IMMEDIATE RELEASE

Cargolux selects TRAX eMobility apps

MIAMI, March 12, 2018 – Cargolux Airlines International has signed to implement TRAX eMobility apps. Cargolux is a scheduled and charter air freight provider that uses an all-747 freighter fleet with over 85 offices in 50 countries. Cargolux also offers third-party maintenance services at its Luxembourg hangar. Over the years, innovative concepts and the constant drive for quality have earned Cargolux a number of awards, including the ‘Best All Cargo Airline’ award, which they received for four consecutive years by Air Cargo News magazine. It is exactly this innovative approach within the industry that is leading Cargolux to go mobile in its maintenance operation.

Cargolux launched its project to roll out the following eMobility apps: TaskControl, QuickTurn and AeroDox iOS apps, supported by the web-based Production Control and Line Control. The apps are fully synchronized with their ERP Trax Maintenance & Engineering system, thus allowing end users access to a paperless environment with real-time information. For example, AeroDox allows maintenance crew to have documents and manuals on a tablet with online and offline access at the point of work. The various apps are intuitive and well-matched to the specific maintenance tasks for AMEs, Crew Chiefs and others. The fact that the apps are fully off-line capable and integrated with their Trax M&E system decreases costs and improves labor efficiency.

The airline and MRO industry are increasingly emphasizing the gains from mobility and the need for smarter maintenance operations. In search of E-signatures and paperless options, they are turning to software such as the TRAX products ‘eMRO’ and ‘eMobility’. Airlines like Cargolux are looking to utilize technology to deliver on their corporate objectives to meet the demands of the business and customers while operating at the highest level of safety and performance every day. To meet these objectives, accurate and timely information needs to be provided to maintenance and ground personnel from wherever they may be working.

Cargolux recently celebrated the milestone of completing their 100th C-Check of a Boeing 747-400 freighter at their Luxembourg maintenance center. As Cargolux continues to increase internal and third-party maintenance capability, the returns from utilization of mobile solutions such as eMobility apps will enhance their performance. TRAX congratulates Cargolux on their choice and looks forward to working on the project with them.
