Frontier selects TRAX eMobility apps

MIAMI, October 9, 2018 – Flying under the tagline ‘Low Fares Done Right’, ultra-low cost carrier Frontier Airlines is the 8th largest commercial airline in the United States. Frontier operates flights to 100 cities in the U.S. and internationally. The airline sports a modern, newer and fuel-efficient fleet of Airbus aircraft. With 77 planes currently in service, Frontier has ordered 191 A320neo and A321neo aircraft to meet its planned growth.

In keeping with their rapid expansion and their “Done Right” pledge, Frontier is taking steps to enhance its safe, on-time and reliable service. Going paperless with Trax eMobility Apps fits right in with this goal. Having tasks, job cards and manuals on a tablet allow for online / offline access at the point of work for the AMEs which results in significant time savings and enhanced on-time performance. Frontier plans to implement most of the eMobility suite of apps including: web applications Production and Line Control; iOS apps QuickTurn, TaskControl, AeroDox, EzStock and VisualCheck.

The web-based Production and Line Control applications allow Crew Chiefs and Controllers to view the production and manpower data in an interactive dashboard to see all tasks, deadlines and non-routine issues, as well as make job assignments. Line and Hangar employees use the QuickTurn, TaskControl and AeroDox apps for defect management, routine task cards and picklists, as well as record A/C P/N transactions and other related activities. The EzStock materials management app allows users to perform common inventory transactions through handheld iOS devices and radio frequency scanners. The VisualCheck app similarly uses RFID technology to track missing or expired emergency equipment such as oxygen bottles, life vests, safety placards, smoke masks, etc.
