## Northern Pacific Airways signs for TRAX eMRO software

MIAMI, April 3, 2023 – Northern Pacific Airways is finalizing its plans to launch a new low-cost long-haul airline on June 2<sup>nd</sup> with a fleet of 757-200 aircraft. While route plans are being firmed up, the airline plans to fly to destinations such as Tokyo, Osaka, Seoul, Los Angeles, Las Vegas, San Francisco, New York city and Orlando from Ted Stevens Anchorage International Airport. The airline is planning to attract passengers embarking on weekend breaks to Las Vegas and looking for a quick and affordable mode of transport. Flights will take just one hour, while driving between the Los Angeles area and Las Vegas clocks in at over four hours.

Northern Pacific has inked a deal with TRAX to implement the web-based eMRO software system to manage maintenance activities on its fleet. Implementing the eMRO cloud solution with its leading-edge technology will bring many advantages to Northern Pacific. Its users will work paperless and have maximum mobility while accessing required documentation and electronic data, viewing assigned maintenance tasks, receiving real-time updates on planned and completed work, tapping into integrated materials modules, and an overall increase in lowered costs, enhanced productivity, and efficiency.

###

**About Northern Pacific Airways:** The low-cost airline's business model has been compared to that of Icelandair as they will allow passengers to either quickly connect to their next flight, or to have a longer multi-day stopover at Anchorage to allow passengers to sightsee Alaska's natural wonders. NPA's plans to boost the Anchorage airport as an important gateway includes building a lounge for the airline, and a mini-IMAX theater. The airline is investing \$6 million in upgrading the passenger experience at its stopover hub.

**About TRAX:** TRAX provides comprehensive software solutions designed to manage all aspects of aircraft maintenance. TRAX is the premier provider of aviation maintenance mobile and cloud products in the global market today. TRAX products support digital signatures, paperless working including Workpacks and manuals, RFID-capability for logistics, Biometric security, offline capability for its suite of mobile apps, web-based applications, and the ability for users to work anywhere with easy access to real-time information.
